# Einrichten der Hauppauge WINTV USB Karte unter Knoppix

(abgekupfert von <http://diantn.free.fr/dp/?q=node/31> )

## Software installation

The only known working driver for this WINTV USB device is usbvision (<http://usbvision.sf.net>). The installation step:

1. Download source:

```
cvscvs -z3  
d:pserver:anonymous@usbvision.cvs.sourceforge.net:/cvsroot/usbvision co -P  
usbvision
```

2. Build: After successful download, go to the src directory inside the source directory, i.e the directory where Makefile exists.

Then

```
sudo make
```

Note: if you fail to 'make', then probably you need to install first linux-header package. Run synaptic to do this, search 'linux-header' and choose one package which corresponds with the used kernel version, e.g. 2.6.x. Install with:

```
sudo apt-get install linux-kernel-headers  
sudo apt-get install build-essential  
sudo make
```

Finally,

```
sudo make install sudo modprobe usbvision
```

to install compiled driver.

3. Configuring xawtv

Copy the xawtv.conf which comes with usbvision to ~/.xawtv
