# Nodered aufsetzen

Der Faulheit halber nimmt man das [fertige C't Setup](#).

Nur leider crasht der NodeRed- Container beim Start, darum ersetzt man das C't Image im docker-compose.yml vor dem ersten Start dann doch mit dem Original von NodeRed und setzt die Ports und

Network modes wie in einer älteren Version, dann geht's jedenfalls 😊

[docker-compose.yml](#)

```
version: '3.6'

services:
  nodered:
    #image: ghcr.io/ct-open-source/ctnodered:latest
    image: nodered/node-red

    ports:
      - "1880:1880"
    volumes:
      - ./data/nodered:/data
      - /etc/localtime:/etc/localtime
    depends_on:
      - mqtt
    restart: always
#   network_mode: "host"
    environment:
      - TZ=Europe/Berlin

  mqtt:
    image: "eclipse-mosquitto"
    ports:
      - "1883:1883"
      - "9001:9001"
    volumes:
      - ./data/mqtt:/mosquitto
      - /etc/localtime:/etc/localtime
    restart: always
    environment:
      - TZ=Europe/Berlin

  zigbee:
    image: koenkk/zigbee2mqtt
    volumes:
      - ./data/zigbee:/app/data
      - /run/udev:/run/udev:ro
      - /etc/localtime:/etc/localtime
```

```
devices:
  - "/dev/ttyACM0:/dev/ttyACM0"
  - "/dev/ttyACM1:/dev/ttyACM1"
restart: always
privileged: true
ports:
  - 1881:1881
environment:
  - TZ=Europe/Berlin
```

Wenn man die ersten MQTT- Node einrichtet: Der lokale MQTT Server läuft dann auf dem Host mqtt und muß auch mit dem Namen als Server angegeben werden.

Beim Start mit `docker compose up nodered with nodered` über fehlende Schreibrechte im data-Folder meckern, das korrigiert man mit

```
sudo chmod a+rwX -R data
```

Die aktuelle Version von mosquitto beendet sich, wenn sie keine `config/mosquitto.conf` findet und lauscht per Default nur an localhost. Man muß die Config also erst bauen:

```
cd docker/nodered/data/mqtt
sudo mkdir -p config
sudo nano config/mosquitto.conf
```

mit dem Inhalt

```
listener 1883
allow_anonymous true
```

## Anbindung an Node-RED Smart Home Control

- Auf <https://red.cb-net.co.uk/new-user> einen User- Account holen
- Auf <https://red.cb-net.co.uk/devices> das erste Gerät einrichten
- Wie [beschrieben](#), die notwendigen Nodes installieren.

Wenn bis dahin alles geklappt hat, wird das Gerät als Device angezeigt, wenn man eine alexa-smart-home-v3 anlegt.

Wenn man dann die Google- Anbindung geschafft hat, kann man mit einer Debug- Node wunderbar die Node- Events reinkommen sehen, wenn man die Google Home Kommandos spricht

## Nützliche Nodes

[Timer in Dashboard](#)

[Hier der komplette Node-Red-Code](#)
